Product Advantages

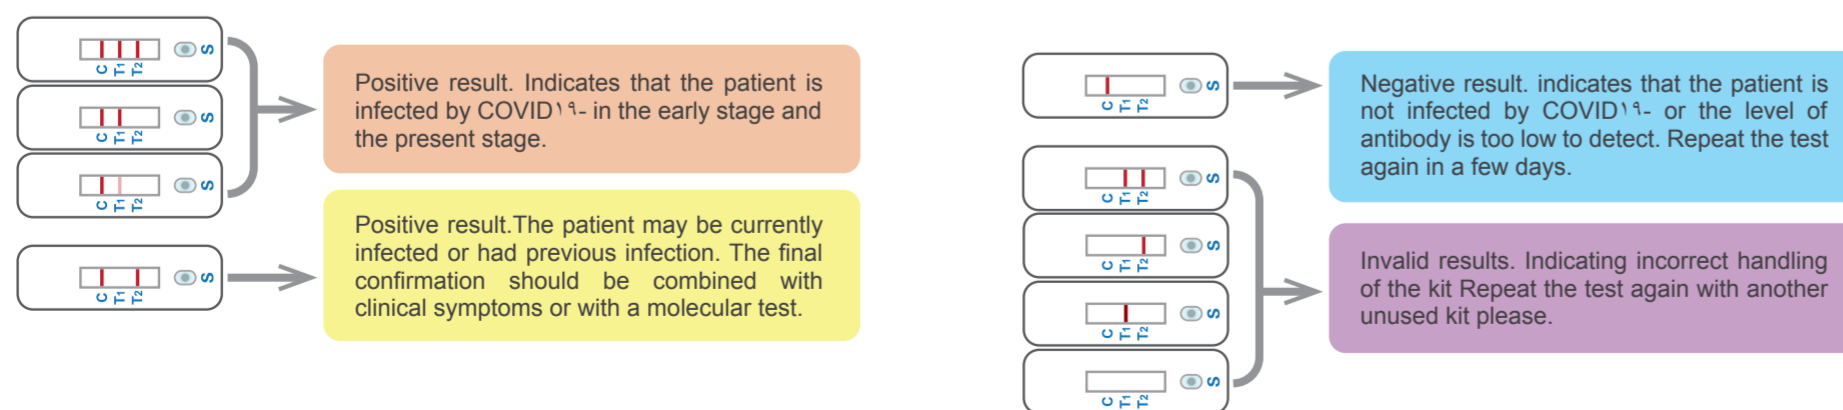

Instruction to Use

Attention: Specific project operations may be different. This is only a demonstration. Please operate according to the product specification.

Interpretation of Results

Product Performance

The Rapid Test was tested in the Chinese Center for Disease Control and Prevention using samples from clinically confirmed patients.

Index	Detection rate
COVID ¹⁹ - T ₁	٪100
COVID ¹⁹ - T ₂	٪93,3
T ₁ + T ₂	٪100
Specificity	٪90,2

bipap@oxgyen

BiPAP & Oxygen Concentrator Combo

Completely connects a CPAP and an oxygen

concentrator through the integrated structure and data protocol, providing a one-stop solution for patients who need CPAP & oxygen treatment, which greatly improve the conveniences, mobility and the effects of treatment.

Model: YC28

THOUGHTFULNESS

Provide integrated solution for patients in need of oxygen and CPAP treatment.

MOBILITY

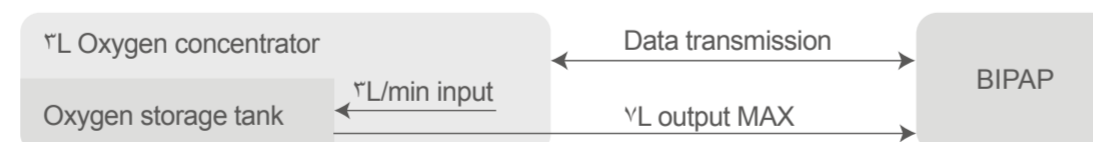

One-stop structure enables easy mobility when using the CPAP and oxygen concentrator.

INTERACTION

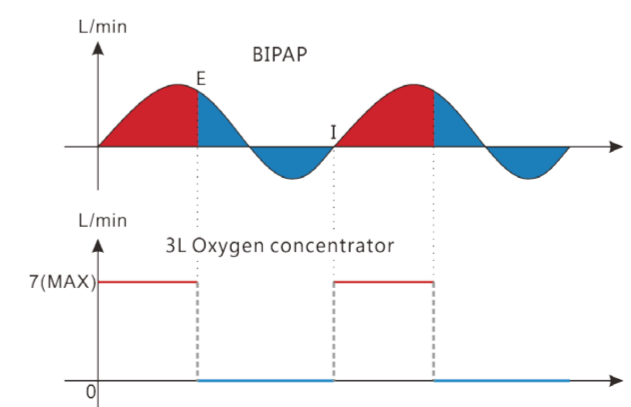

O₂ density and flux of the oxygen concentrator will be displayed with CPAP parameters on a 5" LCD screen.

DATA SHARING

Treatment data can be uploaded to an cellphone APP and a CLOUD platform in real time.

The chart shows how the integrated Respiratory Combo works. During the exhalation phase, when the oxygen concentrator receives a signal from the CPAP, it will reduce the oxygen concentration output and increase the oxygen concentration when the CPAP is in inhalation phase. It greatly improves the output efficiency of the oxygen concentrator and reduces energy consumption, which will be more environmentally friendly and economical.
